

What is claimed is:

1. A structure comprising:  
an annular rim member defining a central opening, the rim member including a  
first frame member;  
5 a flexible and waterproof material attached to the rim member to form a  
containing member that defines a side wall with a containing space therewithin;  
a second frame member attached to the side wall of the containing member  
and spaced apart from the first frame member.
- 10 2. The structure of claim 1, wherein the first and second frame members  
are disposed parallel to each other.
3. The structure of claim 1, further including a third frame member  
attached to the side wall of the containing member and spaced apart from the first  
15 and second frame members.
4. The structure of claim 1, wherein the containing member has a base  
that has a diameter that is greater than the diameter of the rim member when the  
containing space is filled with a liquid.
- 20 5. The structure of claim 1, wherein the first and second frame members  
assume a folded and an unfolded orientation, and the first and second frame  
members are folded into a plurality of concentric frame members when the frame  
members in the folded orientation.
- 25 6. The structure of claim 1, wherein the rim member further includes a  
sleeve that retains the first frame member.
7. The structure of claim 1, wherein the material is PVC.
- 30 8. The structure of claim 1, further including a sleeve that retains the  
second frame member.
9. The structure of claim 1, wherein the containing member has a base,  
with the second frame member positioned along the base.
